HR Analytics Insights & Recommendations

Executive Summary

This dashboard analyzes employee attrition patterns across departments, age groups, salary bands, genders, and job roles. The objective is to identify workforce trends and provide actionable recommendations to improve employee retention and organizational performance.

Key Findings

- The organization has an attrition rate of 14.8%, indicating that approximately 1 out of every 7 employees has left the company.
- Finance and HR departments recorded the highest employee attrition, highlighting potential retention challenges within these functions.
- Employees aged 30–39 experienced the highest attrition, suggesting mid-career professionals are more likely to leave the organization.
- Employees in the high salary band contributed the highest attrition count, indicating that compensation alone may not be sufficient for retention.
- Reporting Analysts and Decision Analytics Associates showed the highest attrition levels among all job roles.

Recommendations

- Conduct employee engagement surveys and retention reviews within Finance and HR departments.
- Develop career progression plans, mentoring programs, and growth opportunities for employees aged 30–39.
- Evaluate factors beyond compensation, including work-life balance, learning opportunities, and career advancement.
- Create targeted retention strategies for Reporting Analysts and Decision Analytics Associates, who demonstrate the highest attrition levels.

Conclusion

The analysis highlights key drivers of employee attrition across departments, demographics, and job roles. By implementing focused retention strategies and addressing workforce concerns proactively, the organization can reduce attrition and improve employee satisfaction.
